

## Generate Hash:-

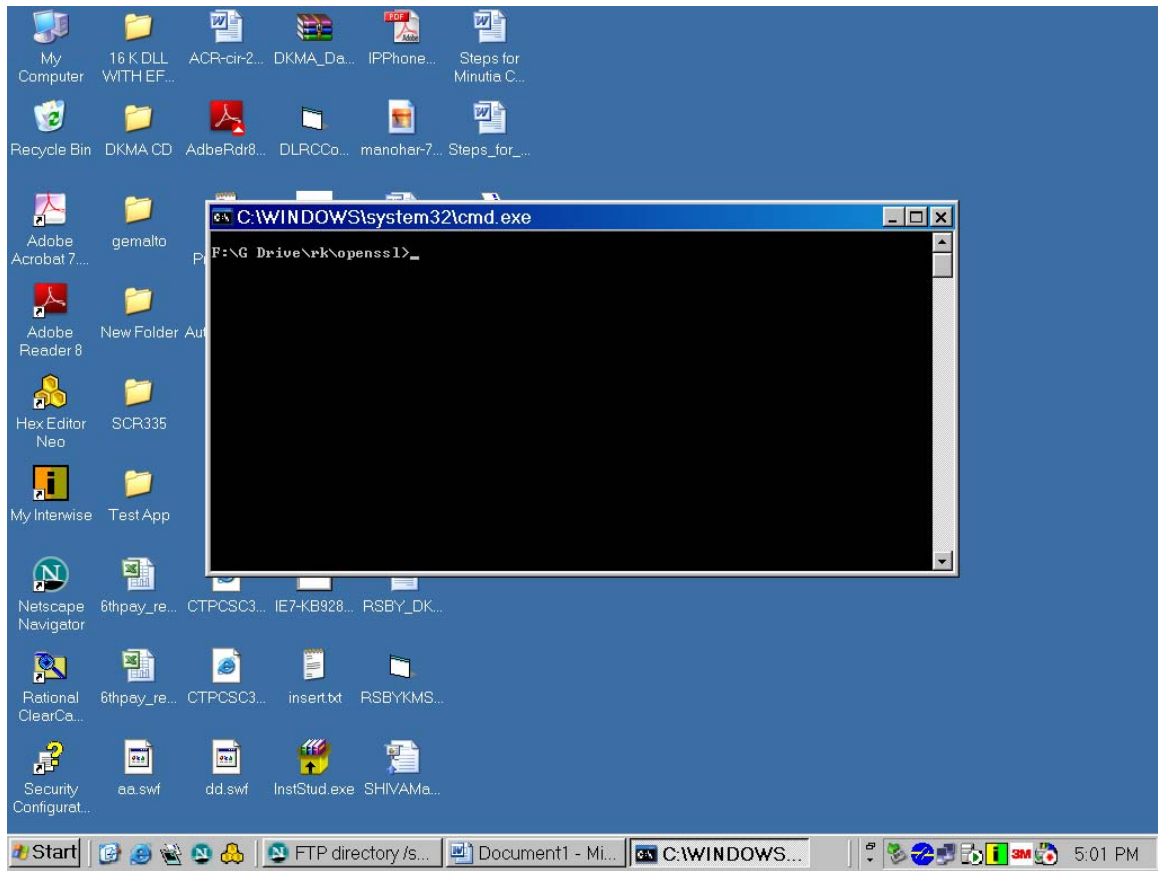

Using OpenSSL, hash can be generated from a document.

Steps are:

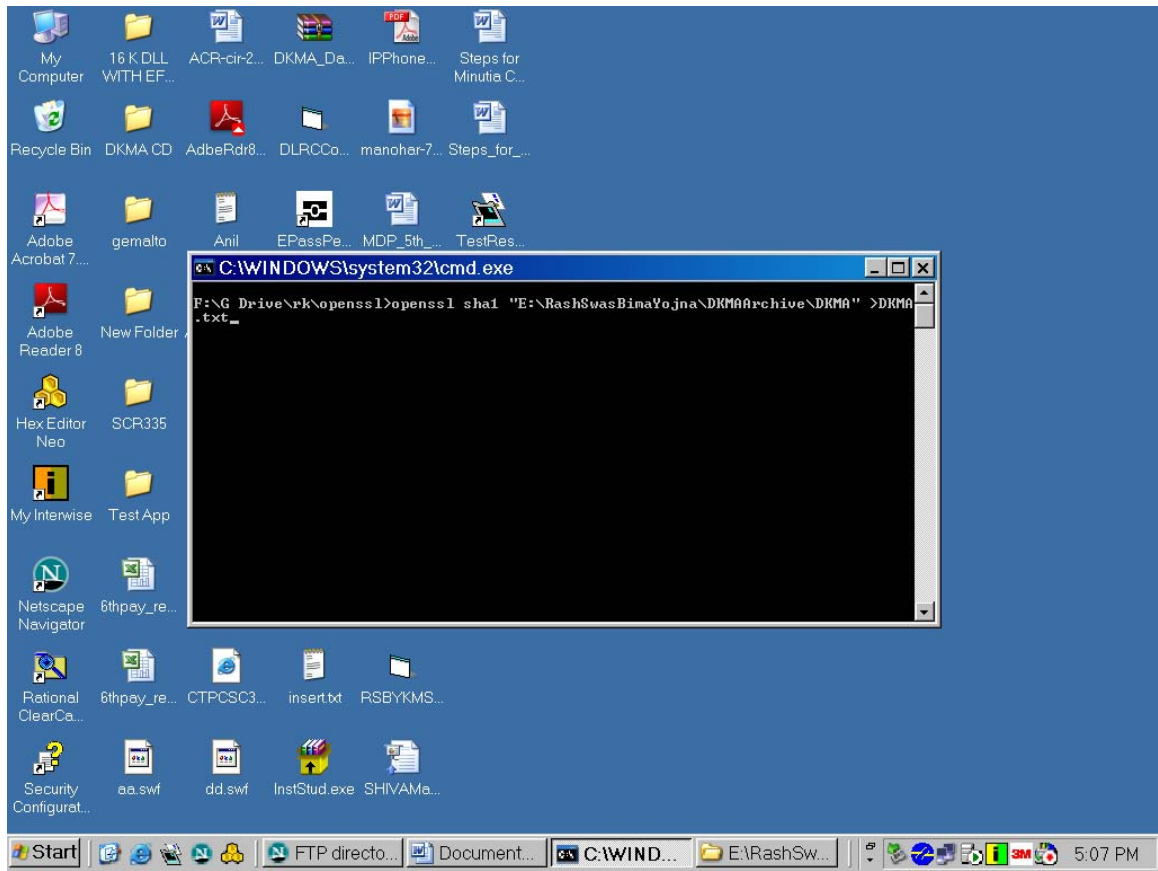

1. Download **OpenSSL.zip**.
2. Unzip it.
3. Copy & Paste OpenSSL somewhere on the system.
4. Go to the Command Prompt (start > run > type “cmd”).

5. Go to the respective directory in which the folder (**OpenSSL**) is copied earlier.

6. Type *Openssl sha1 "DKMA.exe" > DKMA.txt*

7. File named DKMA.txt will be created in the Openssl folder.

8. Open the file and compare the hash with the hash value of the DKMA Software Version (2.3)

**60c7daa1a26e84578d05111f696cff910e575fa2**

9. Both hashes should match.
